

# **Stakeholders:**

## **1. Primary Stakeholders:**

These are the end users who will directly interact with the system or benefit from its analysis outputs:

- Non-finance founders / entrepreneurs – Need simplified insights without deep accounting knowledge.
- Students (business, economics, finance) – Use the tool for learning, projects, and case studies.
- Individual investors / small business owners – Analyze financial health before making investment or growth decisions.
- Financial institutions – Use financial analysis for lending, credit, and investment evaluations.
- Researchers / Academics – Use data for financial studies, comparative research, and academic projects.

## **2. Secondary Stakeholders**

These are indirect users:

- Software developers – Implement backend, database, and API logic.
- Data scientists / AI engineers / Prompt engineers – Build algorithms for data extraction, ratio analysis, and financial predictions.
- UI/UX designers – Ensure the platform is intuitive and user-friendly.
- Project manager / product owner – Manage roadmap, milestones, and stakeholder alignment.
- Government agencies – Ensure compliance, tax audits, and regulatory checks.
- Credit rating agencies – Evaluate solvency and financial stability of businesses.
